BACKEND SOFTWARE ENGINEER

Backend Engineer nearing one year of experience, focusing on solution-oriented approaches in software development and deployment. Well-versed in Continuous Integration and Continuous Development (CI/CD) pipelines. Proficient in developing and managing microservices architecture, as well as configuring infrastructure using Terraform. Dedicated to ensuring the delivery of top-notch software through streamlined development practices and continuous integration processes.

STRENGTHS AND EXPERTISE

- Teamwork
- Communication
- Problem Solving
- Operations management
- Microservices
- CI/CD pipelines
- Software Testing
- Software Development
- Spring Boot (Java)
- Docker & Kubernetes
- Terraform & Ansible
- Jenkins & Git

PROFESSIONAL EXPERIENCE

EXELIENT TECHNOLOGIES

May 2023 - Present

Backend Software Engineer

Innovatively implemented automated deployment processes, resulting in a remarkable 90% reduction in deployment time. Collaboratively participated in the development, testing, and deployment of three applications - all accomplished within an unprecedented record time of three months.

Responsibilities:

- Developed and managed API endpoints using Spring Boot, ensuring efficient and scalable backend solutions for various applications.
- Implemented security measures for authentication and authorization, utilizing JWT and roles/permissions to safeguard application data.
- Specialized in the development of REST APIs, focusing on creating robust and user-friendly interfaces.
- Led the development of microservices, contributing to a modular and scalable architecture for the applications.
- Containerized applications using Docker and Kubernetes, optimizing deployment processes and ensuring consistent environments across different stages.
- Led the deployment of applications using automated tools such as Jenkins and Ansible, contributing to streamlined release processes.
- Worked with both MySQL and NoSQL databases, ensuring proper version control through tools like Liquibase.
- Conducted integration and unit tests on applications, utilizing JUnit and Mockito to maintain high-quality code.
- Established caching mechanisms using Redis, enhancing data delivery efficiency for improved user experience.
- Implemented asynchronous data handling using ActiveMQ and RabbitMQ, optimizing application performance.
- Provided leadership to a team of three in the development of applications, fostering collaboration and achieving project milestones.

EDUCATION

University of Nairobi

September 2018 - April 2023

Bachelor of Science in Electrical and Electronics Engineering
Second class honors (Upper Division)

Maseno School

February 2014 - November 2017

Secondary School Education

Grade: A-

BADGES

- Introduction to Networking CISCO badge.
- AWS Educate Cloud Technologies 101.
- AWS Educate Getting started with Networking.
